Problems about stress

Stress Phenomenon in Adolescents

https://m.segye.com/view/20201217520700
https://goeonair.com/news/article.html?no=16346

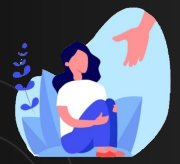

Details of problem

1. Students

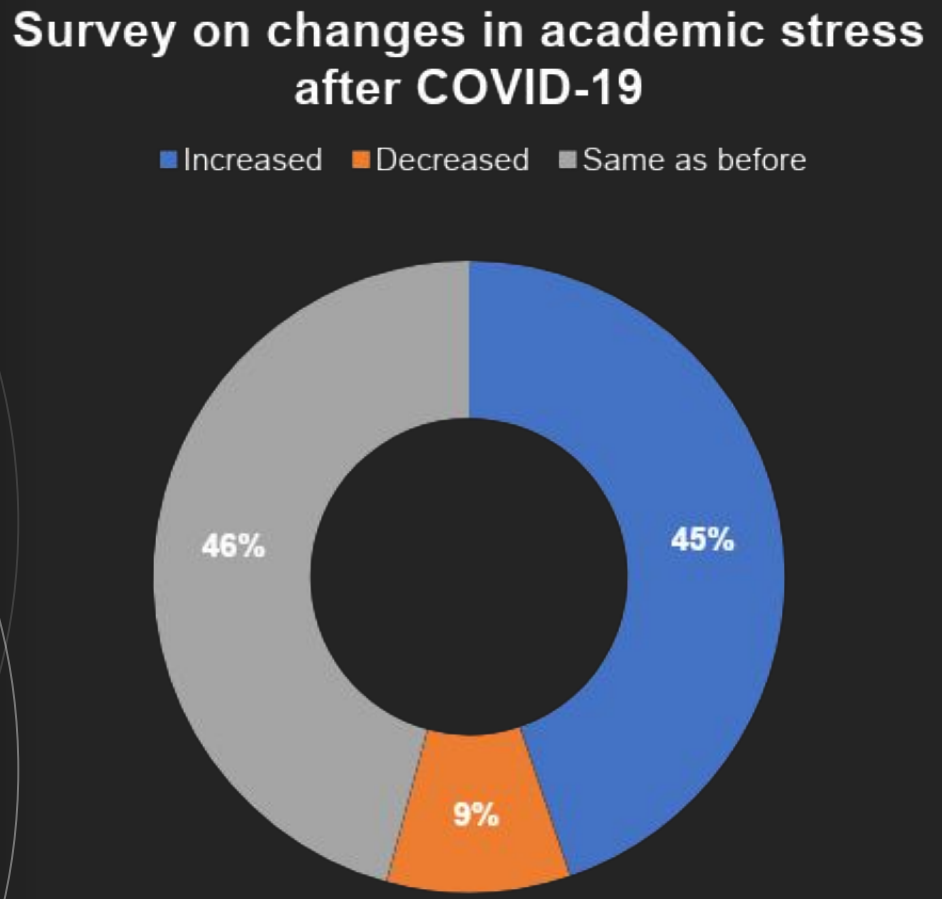

-Students have impact by this problem
->Deep disappointment and frustration with the test results gradually lead to self-criticism and lack of confidence, which can cause depression in severe cases.
-> Academic stress causes mental and physical illness to students

2. Social:

-Social causes this problem
-> the academic stress from elementary school to high school is severe due to the competitive environment centered on education.
-Social has impact by this problem
->Students' stress is a major factor in overindulgence in games among children and adolescents that causes great social problem

Problems about stress

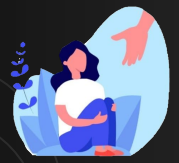

https://m.segye.com/view/20201217520700

Details of problem

->The number of cases of stress that is unbearable after COVID-19 has increased.

->7.6% of the students answered that they had experienced an emotional crisis due to stress. 61.7% of the respondents said that the number of emotional crisis experiences has increased since the COVID-19 experience.

There are many students who have severe stress like emotional crisis after Covid 19.
It's more important to inform stress solutions to the students.

App subject&purpose

1

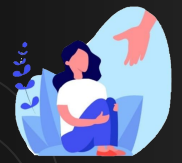

Inform degree of stress of player

There are 3 stages of stress: the alarm stress, the resistance stress, the exhaustion stage.
This app will help students to know their stress stage exactly and cope with their stress
according to the stress stage.

2

Change distress into eustress

There are two types of stress.
Distress means bad stress and it causes a lot of health problems.
Eustress means good stress that can give motivation.
This app will help students to find their own solutions of stress.

App process

Measure your stress

There are many questions that analyze player's stress.
The result of measurement shows player's stress stage
among three stress stages.

Decide your avatar

Avatar is decided depend on the result of measurement.
Avatar has a specific shape that inform player's degree of stress.

Suggest stress solutions

The number of level is decided depend on the stages of stress.
The levels suggest different solutions suitable for the player.
According to level, player should try to reduce stress of avatar.

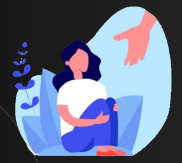

How to use?

STEP1 Measure player stress in quiz part.

STEP2 Decide player's stress stage and avatar is decided depending on the stages of player. There are 3 stages of player: the alarm stage, the resistance stage, the exhaustion stage.

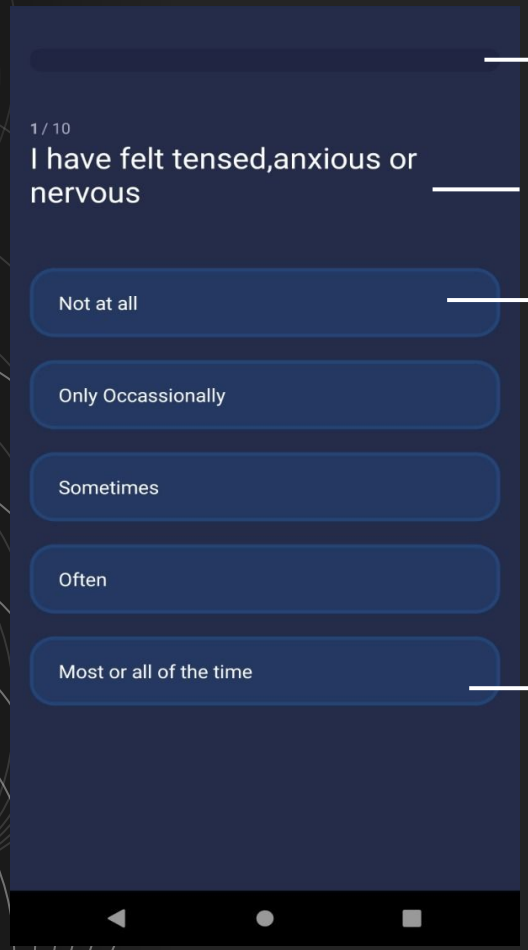

STEP3 Suggest solutions to player by using level. The number of level is decided by the stage of player. (the alarm stage: 3 levels, the resistance stage: 4, the exhaustion stage: 6) Each of the level contain solutions of stress and levels show avatars. The player try to reduce stress of an avatar.

STEP4 If the degree of stress of an avatar becomes zero, back to second UI.
